

Build your own Kayak - Sailboat - Canoe Presentation

Saturday, August 17 at 11:30 AM

Calling all makers! Experience the joy of using a boat you've made yourself! If you can use an electric drill, screwdriver, and handsaw, you can do it. Arthur will introduce you to kayak, canoe, and sailboat designs specifically developed for the first-time home builder. Some "stitch and glue" designs have been compared with dress patterns. Cut out a few pieces of plywood to shape, tie their edges together with a little copper wire, and make them water tight with fiberglass tape. The resulting boat seems magical. These designs also present wonderful opportunities for parent/youngster relationship building.

Be sure to see a sample boat made from one of the designs on display on the second floor of the library.

Join Arthur Strock, who has about 20 home-built boats to his credit, and learn how to get started. Arthur also welcomes the opportunity to field any questions while you're building your boat. For young people and adults. Registration is required, please sign up online or at the branch.
